PURE Digital's **The Bug** is one of the most sophisticated digital radios currently available. The radio really does come alive, thanks to its “blinking eyes” display when the radio is switched on.

A comprehensive feature list allows you to pause and rewind live radio, to catch again something you missed, and save recordings to a memory card.

Wake up to your favourite radio station every morning and store your most-listened stations for quick access using The Bug's hotkeys.

waveband and you can preset
stations and forget about it.”**

**“ clearer reception,
better sound with digital
radio...”**
